## Organic Digester-Plus: A Tall Order

One customer, Dr. Brewer, applied the ODP to his okra (right).

He was entirely happy with the outcome except for one thing: he thinks that next time, we need to provide ladders so his wife can reach the top of the plants!

We'll take that into consideration...

## Weathering the Midwest Storm

John Weirsmas's customer and sister, Grace Weirs, applied Organic Digester-Plus to the yard of her lakefront Midwest home with a hydroseeder.

Two weeks later, the area flooded. The sod that had been applied by Grace's neighbors washed away, leaving their yards bare. Grace's yard, however, successfully weathered the flood and the grass continued to grow with gusto!

The photo displayed to the left was taken a couple of days after the flood - 17 days after the application!

## Benefits of Organic Digester-Plus (ODP)

The benefits of ODP are powerful and plentiful. Here are just a few highlights!

- Reduces salts and their sterilizing effect
- Breaks down plant toxins
- Breaks down chemicals in the soil
- Digests old weed seed
- Balances soil for fewer weeds
- Flocculates the soil
- Increases moisture retention
- Reduces attacks by insects and disease
- Balances soil pH
- Provides a bounty of available plant food
- Increases organic matter in the soil
- Saves farmers money!

---

Soil Restoration LLC's mission is to develop and market products that restore the soil's nutritional balance thereby improving the quality of human health.

## New Distributor Spotlight: Anne Shu

We are excited to work with new distributors: Anne & Bill Shu, farmers in the San Francisco Bay Area.

Anne (left) and Bill, along with their farming partners, run an organic farm (right) with specialty seeds (below).

While they are new to the distributor team, Anne & Bill Shu are not new to ODP—they have been applying the product to their home garden in Sunnyvale, CA for the past few years. Here's what they had to say:

*The apple tree (left) speaks for itself.*

*We cannot be happier to see the apple tree which we planted it last year grew so abundantly.*

*We applied about 2 ounces of ODP mixed with 1 gallon of water when we first planted it last March. This March we did the same, 2 ounces of ODP mixed with 1 gallon of water.*

*We have used the Organic Soil Restoration Digester product for our garden and the persimmon tree (right) has produced better and larger fruits than before. We need to spread the good news and for people to adopt this amazing product.*
