Organic Digester-Plus Testimonials

Featured Testimonial

Sharon is a landscaper in Georgia who is constantly working with Georgia red clay. She has the following to say about Organic Digester Plus when she used it for a few different purposes in her work:

Drip Line for a Red Maple Tree

"I had a 2-year-old red leaf maple. I mixed the soil amendment in a gallon bucket and applied it to the drip line. After about 1 hour, I noticed its appearance had changed. I confirmed it with a friend visiting and was excited that the branches were raised to the point they were upright and the trunk was visible!"

Healthy Soil for Junipers

"I had planted 10 junipers for a client and all but one had died. I retained that survivor and added the product. It is thriving now as well as the 9 new junipers that I had to replace. There must have been residual chemicals which were detrimental to the first junipers that were planted. The product really neutralized the chemicals and the junipers are thriving!"

Noticeable Difference in Vegetables and Flowers

"I see that there is better water retention in all of my vegetable gardens and flower beds!"

Additional Testimonials

Steve & Mary Nehl – North Dakota Dryland Farmers

- Come and look at the (alfalfa) seeding. We have never had a catch this good - ever! We had millet with it and got an awesome crop the first year. It was super dry in June so we thought it had died but you will be amazed.

Reports to Neal Rasmussen – Washington Distributor

- One of my alfalfa farmer's field caretaker noticed that the field that had an application of ODP required less water and had substantial reduced dodder weed growth.

Soil Restoration LLC's mission is to develop and market products that restore the soil's nutritional balance thereby improving the quality of human health.
